## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered. US Patent 5219046 is mentioned on pg. 2 of the specification but is not listed in the IDS.

### ***Drawings***

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

3. The disclosure is objected to because of the following informalities: on pg. 8 lines 1 and 6 "ring 66" should be changed to --ring 67--, in line 5 "flange 67" should be changed to --flange 66--.

Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 3887047 to Harnish et al.

Re: claims 1-8 and 10-18. Harnish et al. show in figure 2 an adjuster assembly for adjusting the release clearance between selectively engageable friction parts to compensate for wear in such parts, comprising a continuous tube 58 and an expansion member 72 together having a combined length controlling the release clearance of the selectively engageable friction parts, the expansion member having an expansion device frictionally engaging the interior of the continuous tube to effect progressive circumferential expansion of the continuous tube when the expansion device is axially drawn through the continuous tube to compensate for wear of the friction parts during actuation and release of said selectively engageable parts, and the continuous tube having an end portion in the area immediately to the left of the end of the lead line of

number 78 processed differently from the balance of the continuous tube for extending the usable portion of the continuous tube.

Re: claim 9. Harnish et al. show in figure 1 brake system comprising a plurality of friction discs 30,34 located between a pressure plate 42 and a reaction plate 27, an actuating mechanism 54 operative for moving the pressure plate toward the friction discs and the reaction plate, and an adjuster assembly as set forth in claim 1 for compensating for wear of the friction discs as shown in figure 2.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patents 3556267 to Hall and 4010828 to Ditlinger teach the use of an energy absorbing expansion member within a tube having radially inwardly projecting end portions. US Patent 3721320 to Hirsch teaches the use of a tube having an inwardly projecting end portion and an expansion member pulled through the tube.
